

Silverpop API Endpoints

There are separate hardware and software environments where we host Engage for our customers. The URL used to specify API calls relates to the URL used when directly accessing Engage with a Web browser. For example, if your organization accesses Engage through the **engage1.silverpop.com** URL, you should use the XML API on **Pod 1 (api1.silverpop.com/XMLAPI)**. If you access Engage through the **engage2.silverpop.com** URL, then you should use the XML APIs on **Pod 2**.

Submit each Engage API request to the URL specified in the table below.

POD	URL
1	api1.silverpop.com/XMLAPI
2	api2.silverpop.com/XMLAPI
3	api3.silverpop.com/XMLAPI
4	api4.silverpop.com/XMLAPI
5	api5.silverpop.com/XMLAPI

Below is an example of a URL that contains a properly formatted jsessionid:

[http://api1.silverpop.com/XMLAPI;jsessionid=dc30d7f451a4\\$EB\\$C3\\$3](http://api1.silverpop.com/XMLAPI;jsessionid=dc30d7f451a4EBC3$3)
